Projects:

Project Name: Employee Master

Role: Application Developer

Technical Environment:

SharePoint Online, InfoPath, Nintex

Description:

Employee Master is a database used to store all details of employees. It's a SharePoint list form developed using InfoPath with three functionalities-insert, update and delete record. InfoPath fetches all details on form through data connection if entry for that user is existing. Every time new entry gets created and status of existing entry gets changed to archived through workflow.

Responsibilities:

- Gathered and analyzed requirements, designed, developed SharePoint web form and workflows to meet client and internal user requirements.
- Developed Nintex workflow for notifying concerned people, updating status and end dates of existing entries.

Project Name: Automation SharePoint

Role: Application Developer

Technical Environment:

SharePoint 2013, CSS, JavaScript, MS flow

Description:

Automation SharePoint is used to create new requests of automation projects. Requestor adds new entry with all details. Core team has authority to approve or reject request with comments. Mails get triggered with details on new entry creation, approval or rejection.

Responsibilities:

- Provided business analysis, gathered requirements, designed, developed SharePoint web form and workflows to meet client and internal user requirements.
- Created technical, functional and business specifications documents.
- Developed MS flow for notifying users and core team on new item entry creation and entry status change with link to view form.

Project Name: Balanced Score Card

Role: Tableau Developer

Technical Environment:

Tableau 2019

Description:

A balanced scorecard is a strategic management performance metric used to identify and improve various internal business functions and their resulting external outcomes.

Responsibilities:

- Involved in requirement gathering
- Developed tableau dashboard with visualizations in chart and table format with multiple data source connections.
- Populated key values on balanced score card structure with quick filters and calculated fields.

Project: CarBooking
Role: Developer

Technical Environment:

.NET Framework 4.5#, C#, HTML, CSS, JavaScript, ADO.NET, Visual Studio 2015, SQL Server 2016, TFS.

Description:

This is web based Application for booking Car. Employee books car by filling personal and travel details based on which other related details of employee gets fetched from database in system. On submit, mail gets triggered to both Employee and admin with details. Admin can approve or reject request. Employee can cancel booking request. Mails gets triggered on every action by admin or employee with particular details. Admin can take report as per the date.

Responsibilities:

- Involved in requirement gathering and designing document.
- Developed web-forms in asp.net.
- Designed and developed SQL Database, stored procedures.
- Used ADO.NET objects such as Data Adapter, Data Reader, Dataset and Data list for reading/updating records in the database.
- Developed master pages.
